

Curtain Enclosures

IES 2000's acoustical curtains are used for indoor and outdoor applications to reduce the noise energy from a piece of equipment or within rooms/buildings.

IES 2000's acoustical curtains are used to reduce the reflection of sound waves or reverberant noise energy within a piece of equipment, a room, or a building. Our curtains provide control for a whole host of outdoor applications as well. A variety of facings are available including our standard industrial grade vinyl facing, and a silicone facing for high temperature or outdoor applications. Curtain panels are typically constructed with grommets across the top.
